

## Driveline Additives

Lubrizol is the only additive company with a product line that covers all on- and off-road driveline applications. With our unparalleled breadth and depth of knowledge, superior technical facilities and talented people, we continue to introduce innovative transmission fluid, gear oil and farm tractor fluid technologies to ensure equipment runs better and lasts longer.

### Products and Applications

**Lubrizol's automatic transmission fluid additive technology** is used in transmissions for passenger cars, commercial vehicles, off-road vehicles and non-transmission applications, such as power steering, small hydraulic pumps and farm equipment. Our technologies control sludge and varnish; prevent rust and corrosion; prevent fluid leakage; and protect gears, clutch plates, bushings and other metal parts.

**Lubrizol's gear oil additive technology** has applications in passenger cars, trucks and heavy equipment. Lubrizol's Anglamol® gear oil additive packages focus on friction reduction, heat removal and extreme pressure anti wear additives to prevent wear, pitting, spalling, scoring, scuffing and other types of distress that can result in equipment failure and downtime.

**Lubrizol's off-highway lubricant additives** are used in fluids that lubricate transmissions, final drives, wet brakes, transmission clutches and hydraulic systems, typically from a common fluid reservoir on the vehicle. Off-highway lubricants are used in both on and off-highway commercial transmissions, high-pressure hydraulic systems, and construction, mining, agricultural and forestry equipment.

### Research, Manufacturing and Sales

The Lubrizol Corporation is geographically diverse, with an extensive global manufacturing, supply chain, technical and commercial infrastructure. Lubrizol owns and operates manufacturing facilities in 17 countries, as well as sales and technical offices around the world.
