Injection Molding

Applications

All medical device components with design requirements for silicone, including balloons, sensors, manifolds, strain reliefs and many other applications. Built on four decades of medical-grade silicone molding experience, Vesta's solutions optimize the clinical outcome of silicone injection moldings and ensure compliance with your requirements.

Function

Critical Design Components Resulting from Molding Silicone Operations

Vesta offers design assistance, tooling and experienced operators to ensure product functionality and to support optimal design performance and clinical outcomes.

Description

Moldings in Any Design

Vesta's experienced engineering team will work with you to design the most effective tooling required to achieve your desired outcomes.

Technology

Exceptional Tooling, Robotics, Presses and Infrastructure

Vesta designs and operates state-of-the-art tooling built to accommodate some of the industry's most complex geometries. With a combination of proprietary and industry-leading presses,

Molding | Extrusion | Assembly

Silicone inquiries: 414.423.0550 | Thermoplastic inquiries: 951.547.7400 sales@vestainc.com | www.vestainc.com ISO 13485:2003 Certified

as well as high-volume robotics, Vesta determines the most appropriate manufacturing option for your medical device and ensures compliance with your production capability requirements.

Competency

Tight-Tolerance, Custom Injection Molding

To many industry experts, Vesta is silicone molding. We specialize in a variety of molding process techniques to develop and deliver the highest-quality product possible. We ensure:

- Safe and effective mold storage
- Compliance with mold maintenance programs
- Mold life tracking for shot history and yield measurement
- Prototype molding for rapid product development services
- Dedicated equipment to support your research and development needs
- Flash tolerances as low as .002", as well as flashless molding solutions
- Proprietary washing operations to ensure product integrity
- Innovative fixture and process development
- Experienced process engineering oversight for all molding operations

caring for the life of your product
